

Your child's vaccine schedule

* first dose, **second dose, *** third dose

6-in-1 protects against diphtheria, tetanus, whooping cough, polio, Hib and hepatitis B

4-in-1 protects against diphtheria, tetanus, whooping cough and polio

**Follow your child's vaccine schedule
to protect them against illnesses**

**Stick this
timeline up as a
useful reminder**

- Childhood illnesses like measles and whooping cough are rising
- These illnesses can make children very sick, leading to hospital stays or lifelong problems
- If your child is not vaccinated, they are not protected
- It's important that vaccines are given on time for the best protection. Some need booster doses later too
- Check your child's red book or speak to your GP practice to see if they have missed any
- You can still catch up on most missed vaccines
- All the childhood vaccinations are free. As children grow up, they will be offered more vaccine appointments, right up until they are teenagers. Some vaccines are offered at school
- Vaccinations offered by the NHS are thoroughly tested to assess how safe and effective they are. All medicines can cause side effects, but vaccines are among the very safest.
- Research from around the world shows that immunisation is the safest way to protect our children's health
